

ABSTRACT
For
INITIATION OF SERVICES IN TELECOMMUNICATIONS
NETWORK

The invention relates to a method of initiating services in a telecommunications network and a telecommunications network. The invention is based on the idea that at least two control point addresses are set to which a service request can be sent, and that the service request is sent to the address selected on the basis of the congestion information and/or the service request is sent to the set addresses one at a time, until service is initiated at one address.
